US-10-063-688-34 3502 1 MRTVVLIMKASVIEMFLVLL......QYVPRIIQNICTBFNSQPRN 678 Title: Perfect score: Sequence:

BLOSUM62 Gapop 10.0 , Gapext 0.5

Scoring table:

283366 seqs, 96191526 residues Searched:

283366 Total number of hits satisfying chosen parameters:

Minimum DB seq length: 0 Maximum DB seq length: 200000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

PIR_78:* 1: pir1:* 2: pir2:* 3: pir3:* 4: pir4:* Database

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Cartilage matrix protein precursor - chicken
C;Species: Gallus gallus (chicken)
C;Species: Gallus gallus (chicken)
C;Bate: 09-Mar-1990 #sequence_revision 09-Mar-1990 #text_change 28-Jul-2003
C;Accession: A33809; A26364
R;Kiss, I.; Deak, F.; Holloway Jr., R.G.; Delius, H.; Mebust, K.A.; Frimberger, E.; Argr J. Biol. Chem. 264, 8126-8134, 1989
A;Title: Structure of the gene for cartilage matrix protein, a modular protein of the ex A;Title: Structure of the gene for cartilage matrix brotein, a modular protein of the ex A;Title: Structure of the green for cartilage matrix protein, a modular protein of the ex A;Title: Structure of the green for cartilage matrix protein, a modular protein of the ex A;Title: Structure of the green for cartilage matrix protein, a modular protein of the ex A;Title: Structure of the green for cartilage matrix protein, a modular protein of the ex A;Title: Structure of the green for cartilage matrix protein, a modular protein of the ex A;Title: Structure of the green for cartilage matrix protein, a modular protein of the ex A;Title: Structure of the green for cartilage matrix protein, a modular protein of the ex A;Title: Structure of the green for cartilage matrix protein, a modular protein of the ex A;Title: Structure of the green for cartilage matrix protein, a modular protein of the ex A;Title: Structure of the green for cartilage matrix protein of the ex A;Title: Structure of the green for cartilage matrix protein for cartilage matrix protein for cartilage matrix protein for cartilage matrix
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A;Accession: A33809

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Appearance of extracellular polymer associated with anchoring the structural component of extracellular polymer associated with anchoring the structural conjecture and the structural conjecture and the structural structu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A;Map position: 3p21.3-3p21.3
NyNORCE: defects in this gene can result in dominant and recessive dystrophic epidermolys
A;NORCE: there are 118 introns
C;Complex: type VII collagen is probably a homotrimer

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                             678

Watanabe CK; Smith V,

Membrane-bound proteins and related nucleotide sequences.

Claim 12; Fig 113; 822pp; English

The invention provides membrane-bound PRO polypeptides and polynucleotides encoding them. The PRO sequences of the invention were identified based on extracellular domain by exceening. The PRO sequences have homology with proteins including LDL receptors. TIB ligands and various enzymes. The membrane-bound proteins and receptor molecules are useful as pharmaceutical and diagnostic agents. Receptor furnuncadhesins, for instance, can be used as therapeutic agents to block receptor-ligand interactions. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction. The PRO encoding sequences are useful as hybridization probes, in chromosome and gene mapping and in the generation of antisense RNA and DNA. PRO nucleic acid sequences will also be useful for the preparation of PRO polypeptides, especially by recombinant techniques

Sequences AAU29024-AAU29328 represent PRO polypeptides of the invention.

The PRO polypeptides and their associated nucleic acids can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of cells from the animal and a control sample of normal cells, whereby a higher level of and a control sample of normal cells, whereby a higher level of an amamal include dogs, cats, cattle, horses, sheep, pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNP) alpha release from human blood, when contacted with it. A specific polypeptide can be used to stimulate the proliferation or differentiation of chondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also protein can be used to determine the presence of tumours and also cusceptibility to tumour development, particularly adrenal, lung, colon, breast, prostate, rectal, cervical, or liver tumours, in mammalian subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

The present sequence is a human PRO polypeptide (secreted and transmembrane). The PRO protein, and PRO agonists, PRO antagonists or anti-PRO antibodies are useful for preparation of a medicament useful in the treatment of a condition which is responsive to the PRO protein, agonists, antagonists or anti-PRO antibodies. The PRO protein may also be employed as molecular weight markers for protein electrophoresis. The PRO coding sequence has applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping

The present invention describes human secreted and transmembrane PRO proteins. The PRO proteins have cytostatic activity. The PRO proteins be used for targeted delivery of bioactive molecules, such as toxins, radiolabels or antibodies, that cause cell death. PRO nucleotide sequences, and their fragments, can be used as hybridisation probes, in chromosomal and gene mapping, and in the generation of anti-sense RNA and DNA. They may also be used to produce transgenic animals which are used to develop and screen therapeutically useful reagents. The PRO nucleotide and protein sequence can be used for tissue typing and in treating cancer. Anti-PRO antibodies can be used in diagnostic assays. AAF44270 to AAF44470 represent PCR primers and hybridisation probes used in the isolation of human PRO beginneres. AAF446530 to AAF44269 and AAB65154 to AAB65300 represent human PRO polynucleotide and protein sequences given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240
                                  PRO polynuclectides used to produce polypeptides used to target bioactive molecules such as toxins, radiolabels or antibodies, to specific cells, to cause targeted cell death.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           480

(GETH) GENENTECH INC.

Godowski PJ; Goddard A, Wood WI; Gerritsen MB, Watanabe CK, Baton DL, Filvaroff E, Grimaldi JC, Gurney AL,

New isolated secreted and transmembrane PRO polypeptide useful for modulating biological activity of a cell, or for treating sports-related joint problems, osteoarthritis or rheumatoid arthritis.

Claim 20; Fig 34; 399pp; English.

The invention relates to an isolated secreted and transmembrane PRO
C polypeptide having 80 % sequence identity to a sequence appearing as
CC polypeptide having 80 % sequence identity to a sequence appearing as
CC ABG958513-ABG95914 or their associated signal peptide.
CC extracellular domain of the proteins with their associated signal peptide.
CC cids annowing the proteins with their associated signal peptide.
CC or lacking its associated signal peptide. Also included are the nucleic
CC antibodies which specifically bind to the proteins. The proteins are
CC useful for detecting a polypeptide designated as A, B, C or D in a sample
CC subpected of containing an A, B, C or D polypeptide. By containing the formation of a A/B, B/P, B/G, C/H or D/I polypeptide
CC conjugate in the sample, where the formation of the conjugate is
CC conjugate in the sample, where the formation of the conjugate is
CC indicative of the presence of an A, B, C or D polypeptide, C is a
CC indicative of the presence of an A, B, C or D polypeptide, C is a
CC indicative of the presence of an A, B, C or D polypeptide, H is a
CC oplypeptide, D is a PRO19760 polypeptide. The sample,
CC where A is a PRO10272 polypeptide, G is a PRO2010 polypeptide, H is a
CC polypeptide, D is a PRO19760 polypeptide. The sample comprises
CC acell suspected of expressing the A, B, C or D polypeptide.
CC H or I polypeptide is labeled with a detectable label or is attached to a
CC to a cell expressing a polypeptide designated as A, B, C or D or B, F, G,
CH Or I. The bioactive molecule is a toxin, a radiolabel or an antibody.
CC to a cell expressing a polypeptide designated as A, B, C or D or
CC or I, or antibodies against them are useful for modulating a biological
CC corivity of a cell expressing a polypeptide designated as B, B, C or D or
CC B, F, G, H, or I. The cell is killed The proteins are useful for
CC corivity of a cell expressing a polypeptide designated as B, B, C or D or
CC B, F, G, H, or I. The cell is killed and the proteins are useful for
CC designated

                                                                                                                                                                                                                                                                                                                                                                                                             18-DEC-1997
               ABU58474;
    useful in the treatment of a condition which is responsive to the proteins, as molecular weight markers for protein electrophoresis purposes, and as therapeutic agents for treating sports-related joint problems, articular cartilage defects, osteoarthritis or rheumatoid arthritis. Nucleic acids encoding the proteins are useful as hybridisation probes, in chromosome and gene mapping, in the generation of anti-sense RNA and DNA, for the preparation of the proteins, to generate transgenic or knockout animals which are useful in the development and screening of therapeutic useful reagents, for chromosome identification, and in gene therapy. The antibody is useful as a therapeutic agent, in a diagnostic assay and for affinity purification of the protein from recombinant cell culture natural sources. The present sequence represents a novel secreted or transmembrane protein of the
                                                                                                                                                                                                                                                                                                      240
                                                                                                                                                                                                                                                                                                                                                                    240

Novel isolated PRO polypeptides e.g., PRO826, PRO1068, PRO1184, PRO1346 and PRO1375, which stimulate proliferation of stimulated T-lymphocytes are therapeutically useful for enhancing immune response and in cancer creatments.

Claim 12; Fig 113; 648pp; English.

The invention describes an isolated human PRO polypeptide. The PRO CC polypeptides are useful in detecting PRO polypeptides in a sample, in modulating a bioactive molecule to a cell expressing a PRO polypeptide, and in modulating at least one biological activity of a cell expressing a PRO convented by the polypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus polypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus polypeptide. PRO1312 stimulates processing a PRO536, pro943, PRO926, PRO9137 induce -cfos in endothelial growth, and PRO536, pro943, PRO926, PRO9136 induce -cfos in endothelial cells, and are thus cuseful for treating conditions or disorders where angiogenesis would be beneficial, e.g. wound healing and antagonist of this polypeptide are useful for treating conditions or disorders where angiogenesis would be concerned tumours. PRO912 inhibitis vascular conditions of the propertied are angential for treating conditions of timulated proliferation of endothelial growth factor (VRGF) stimulated proliferation of endothelial growth factor (VRGF) stimulated proliferation of endothelial growth would be beneficial in inhibiting tumour growth. PRO926, CR PRO1068, PRO1184, PRO9136 and PRO1135 endothelial cell growth in response. PRO928, PRO926, PRO9132 is also enhances survival of retinal neurons cells (PRO1132 is also enhances survival) prospected of sorders are useful for treating kidney disease or coher compropathies associated with dermalian kidney mesangial cells, and therefore are useful for treating kidney disease or coher cepaciated with dermalian serial propathies associated with dermalian propagation of cherace of thus useful for treating sporte injuries, and arthritis. This is the construction such a protein and proves in the profession and provession of a novel human PRO protein
